Dear

I am interested in the study of insect morphology, physiology and ecology in general, and of ticks (Ixodoidea), fleas (Siphonaptera), mosquitoes (Culicidae) and other parasitic insects in particular. I am also interested in the study of plague and malaria and plague and malaria preventive measures, and was engaged for a number of years on determining the factors responsible for the recrudescence of plague in the Southern India, and on the use of DDT, 666 and rodent poisons as antiplague measures. As I am at present stationed at a place, where most of the current literature on these subjects is not available, I shall be grateful if you favour me with a reprint of each of your papers listed below. If you have published other papers besides those mentioned, please send me a copy of each of them. If you want in exchange reprints of any of my papers, I shall be pleased to send them to you.

Thanking you in anticipation for the gift of the reprints of your papers, and for putting my name on your mailing list for future reprints,

Sincerely yours,
